Technical Skills

C • C++ • Python • Java • Solidworks • Fusion PCB • Embedded Systems

EDUCATION Georgia Tech

*B.S. in Mechanical Engineering -
Robotics Concentration*

Expected May 2028

Atlanta, GA

- Current GPA: 3.91
- Spring 2025 Faculty Honors (4.0 semester GPA with 12+ Credit hours)

ME 2110 Finalist

Placed 4/56 in end of year competition

- Fabricated and designed an automated robot over the course of the semester on a team of 4
- Designed the robot to meet several constraints and complete specified tasks on a competition track to earn points
- 4 teams competed on a track to compete for the most points for 7 rounds

Placed 3/56 in end of year design review

- Created a poster to showcase robot and all sub-systems
- Presented alongside team members to explain our robot and sub-systems to 4 judges

TEAM EXPERIENCE - CanSat Robotics Club

Founding President

May 2025 - Present

Atlanta, GA

A club at Georgia Tech, which designs robots for competitions involving rockets and operating robots after rocket launches.

- Started club with help of 4 other founding members
- Managed recruiting
- Managed branding
- Oversaw design, prototyping, fabrication, and testing of multiple robots
- Oversaw software development for team tools and main code for each robot
- Systems testing and data collection
- Managed team spending and secured funding for travel

RESEARCH EXPERIENCE - Hip Exo Control Team at Georgia Tech EPIC Lab

Undergraduate Research

July 2024 - Present

Atlanta, GA

- Assisted in 30+ data collections and experiments for training deep learning models and evaluating performance of a Hip Exoskeleton on chronic stroke survivors.
 - Assisting subjects with tasks, ensuring subject safety, and setting up and managing 3D motion capture software.
- Hardware interface improvements for novel hip exoskeleton application on chronic post stroke survivors.
 - Hand sewing fabric together and onto 3D printed parts, and 3D modeling mechanical components to improve robustness and comfort.
- Training deep learning models with biomechanical data
 - Processing large datasets and formatting for use in a deep learning model

WORK EXPERIENCE - Once Driven Restorations

Mechanics Apprentice

August 2022 - August 2023

Savannah, GA

- Performed vehicle maintenance to complete frame-off restorations on vehicles circa 1985 and before.
- Removed motors by hand, by myself, being thorough to ensure everything is disconnected before removal
- Stripped paint from cars, removed interiors, and completed rust repair by removing the rust, fabricating replacement sheet metal, and welding it to the car.
- Completely removed the body of an International Scout from its frame to be restored.
- Installed after-market parts for repair or modification to vehicles.

PERSONAL PROJECT EXPERIENCE

- Built and fabricated a compact electrolysis reactor powered by a custom lithium-ion battery pack, where I designed and fabricated electrodes, housings, gaskets and safety mechanisms.
 - Monitored the flow of gas, temperature, and reaction time of the reactor to evaluate and improve efficiency for the small size.
- Built a home automation system allowing me to control lights, speakers, etc. through voice commands.
 - Created a server-client system where the server with high computing power detects commands, then sends that information to the client wirelessly via TCP communication. The client then controls the devices in my room.
