Technical Skills

C • C++ • Python • Java • SOLIDWORKS • Fusion PCB • Embedded Systems • Linux • Machining • 3D Printing

Soft Skills

Problem Solving • Project Management • Communication

EDUCATION Georgia Tech

*B.S. in Mechanical Engineering -
Robotics Concentration*

Expected Spring 2028

Atlanta, GA

- Current GPA: 3.71
- Spring 2025 Faculty Honors (4.0 semester GPA with 12+ Credit hours)
- Lathe and Mill certified at the Montgomery Machining Mall

ME 2110 Finalist

Placed 4/56 in end of year competition

- Fabricated and designed an automated robot over the course of the semester with a team of 4
- Designed the robot to meet several constraints and complete specified tasks on a competition track to earn points
- 4 teams competed on each competition track to earn the most points for 7 rounds

Placed 3/56 in end of year design review

- Created a poster to showcase robot and all sub-systems
- Presented alongside team members to explain our robot and sub-systems to 4 judges

CLUB EXPERIENCE - CanSat Robotics Club

Founding President

May 2025 - Present

Atlanta, GA

CanSat Robotics Club designs various robots for a competition that simulates designing an autonomous rover for use in space.

Website: <https://cansatroboticsclub.github.io/> • Competition: <https://www.arliss.unisec.jp/>

June 2025 - September 2025

- Built and designed a GPS autonomous Rover under strict time and design constraints from scratch with a team of 5
 - Designed and assembled PCB to integrate independent sensors and micro controllers in Fusion PCB
 - Developed hardware interface code for specialized communication between the micro-controller and sensors in C
 - Developed real time sensor fusion and filtering code in C
 - Developed, implemented, and tuned PID controller for autonomous navigation in C
 - Developed tests and collected data on battery life, controller performance, and structural integrity
 - Rapid prototyping to quickly design and iterate the Rover
- Secured \$5,000 to fund team travel to Nevada for the competition
- Managed team accounting for materials spending to ensure all purchases were reimbursed

October 2025 - Present

- Founded club with original team of 5
- Organized club to promote leadership, learning, and collaboration
 - Setup collaborative Notion space for documentation and project tracking
 - Structured club into sub teams to provide leadership opportunities
 - Designed deliverables based project structure to encourage self-motivated work for all members
- Led consistent recruiting and advertisement effort
 - Developed landing page website to advertise our club's projects and competition
 - Attended numerous recruiting events to increase club awareness and gain new members

- Interviewed 30+ people turning over 20 new members
- Cultivated industry partnership with Ground Control Robotics, resulting in technical presentations for the team
- Procured \$2,100 funding for long term equipment and tools
- Concurrently led the Rover and Electronics development sub teams
 - Trained and mentored all team members on the design process
 - Oversaw and coordinated the development of redesigns to the entire Rover robot and its electronics

RESEARCH EXPERIENCE - Hip Exo Control Team at Georgia Tech EPIC Lab

Undergraduate Research

July 2024 – December 2025

Atlanta, GA

- Assisted in 30+ data collection experiments
 - The data was used to train deep learning models and evaluate the performance of the Hip Exoskeleton on chronic stroke survivors
 - Assisted subjects with tasks while ensuring subject safety
 - Set up and managed 3D motion capture software
- Improved hardware interface for the Hip Exoskeleton with design specific to chronic post stroke survivors
 - Hand sewed fabric to 3D printed parts
 - Sewed buckles onto existing fabric
 - 3D modeling of mechanical components designed for robustness and comfort
- Training deep learning models with biomechanics data
 - Processing and formatting large datasets for use in a deep learning model
- Designed and carried out independent analysis of chronic post stroke gait symmetry

WORK EXPERIENCE - Once Driven Restorations

Mechanics Apprentice

August 2022 - August 2023

Savannah, GA

- Performed vehicle maintenance to complete frame-off restorations on 1985 and older vehicles.
- Disconnected and removed motors from multiple vehicles
- Stripped and sanded paint to bare metal for repainting and rust repair
 - Removed rusted metal from car body and hand fabricated and welded replacement sheet metal
 - Body work and surface prep for painting
- Completely removed the body of an International Scout from its frame
- Installed after-market parts for repair or modification to numerous cars

PERSONAL PROJECT EXPERIENCE

- Built and fabricated a compact electrolysis reactor powered by a custom lithium-ion battery pack
 - Designed and fabricated electrodes, housings, gaskets and safety mechanisms
- Developed a home automation system to control lights, speakers, etc. through voice commands.
- Set up personal Linux home server with Proxmox
 - Set up a Nextcloud virtual machine to host my personal documents, backup my files, track my todos, and host my calendar
 - Set up a Vaultwarden container to host my passwords for my password manager
